Problem:

- People with early–stage Dementia, Alzheimer's, or CTE deal with:
  - Memory loss of past events and people
  - Lack of social engagement with family members
  - Worsening conditions and strained relationships
  - Possibility of more intensive care if nothing helps slow down their rate of memory loss

Solution:

- A mobile/tablet application that:
  - Creates digitial scrapbooks from old photos, videos, and audios
  - Helps slow the progression of degenerative memory loss
  - Uses reminisence therapy to improve quality of life
  - Provides a report to montior user's progress
  - Strengthens connection between families and loved ones
